## Another “Win” for the Environment with Innovative Environmental Technology

Pickering, Ontario/ October 2007 A recognized leader in environmental technology, Eco-Tec is proud to announce that it has recently been awarded the **Canadian Innovation Award** for **Environmental Technology** during the Canadian Manufacturers and Exporters' 8th Annual Awards Ceremony.

"Given our current economic times, there perhaps has never been a greater time and a greater need for Canadian Business to be more innovative", said Jayson Myers, CME president. "With an increasingly global economy, Canadian business must rise to the challenge to compete on the world's stage."

### Biogas Technology Brings Another Win for the Environment

[Eco-Tec Inc.](#) is a globally recognized manufacturer of water purification, gas processing and chemical recovery systems for industrial operations. Providing proven, integrated technologies that offer significant cost reduction and superior process efficiency, Eco-Tec's biogas purification system was the winner of the Canadian Innovation Award for Environmental Technology.

Biogas is a mixture of methane, carbon dioxide and water and is usually contaminated with highly corrosive levels of Hydrogen Sulfide (H<sub>2</sub>S). Eco-Tec's patented technology absorbs H<sub>2</sub>S from methane in a simple, economical package and the resulting gas is purified for use in power generation, cogeneration and heating applications.

This biogas technology joined Eco-Tec's product lines as another innovation from the brilliant minds from the University of Toronto's Department of Chemical Engineering and Applied Chemistry. Dr. James Smith invented the patented process and joins Eco-Tec in bringing economical and effective Biogas Purification to the global market.

This unique technology can be used across a wide variety of industries including: pulp and paper mills, landfill gas, industrial processing, wastewater treatment plants, food and beverage processing and meat rendering plants. The biogas purification system reduces greenhouse gases, creates minimal waste and increases energy recovery.

In 2005, Eco-Tec was announced as the winner in this same Environmental Technology category, and continues to be a leader in the field of environmental preservation.

**About Eco-Tec** ([www.eco-tec.com](http://www.eco-tec.com))

Eco-Tec is an award-winning, globally recognized manufacturer of water purification, gas processing, and chemical recovery systems for industrial operations. Eco-Tec provides proven integrated technologies based on proprietary technologies that offer significant cost reduction and superior process efficiency. Eco-Tec has provided more than 1500 systems in over 52 countries, and is represented in all major markets.
